

Julian ADJIBI

Full-stack software engineer with +3 years of experience and specialization in HTML, CSS, PHP, JavaScript, SQL. I am motivated to pursue a successful career in software development. As a freelancer, I have successfully worked on many exciting projects, including the implementation of an OAuth 2.0 system to connect multiple SAAS applications with a single account. My skills include the ability to work remotely and use different frameworks such as Bootstrap, Tailwind, Laravel, Livewire and React JS and MySQL database manager, PostgreSQL and MySQL Workbench.

PROJECTS

BENIN TOURISME NET

- Online platform that allows users to search, compare and reserve

It is a management platform for a company specialized in renting cars, apartments, audiovisual equipment and materials, and many other products. Specifically, it includes customer management, rental management, inventory management, income management and cash management. It offers the possibility to have a visibility of the activity related to the cash desk (entries/exits) and to be notified of each operation carried out, an e-mail at the end of the day and a report on the rentals carried out (classified by product), the revenues carried out and what remains to be cashed.

■ [WAZEMI:](#)

This project is a web application that offers transportation services (motorcycle and car). It allows you to make reservations at any time of the day. Its main features are :

- Make a reservation
- Rate a driver
- Collect information about the customer
- Recommendation system for customers
- Calculate the route of the trip and estimate the price of transportation.

■ [IXIOXI:](#)

This is the project in which we are talking about the implementation of an OAuth 2.0 system that will allow the deployment of several SAAS applications on a main platform with the aim of facilitating the connection to all SAAS applications with a single account that will be created on the main platform in order to avoid the creation of an account on each application. In a second step, we have the implementation of the multi-tenant database system in each SAAS application to allow the separation and the securing of the data of each company using the applications of the platform.

■ [BENIN TOURISME NET:](#)

Online hotel booking platform that enables customers to search, compare and book hotel rooms at competitive rates. The platform features a user-friendly interface that allows customers to browse through a wide range of hotel options, filter results by price, location and rating, and view detailed information about each hotel, including amenities, photos and reviews. The platform also offers a secure payment gateway and instant booking confirmation, providing customers with a hassle-free booking experience.

hotel rooms at competitive rates

- Built with PHP, HTML, CSS3, Javascript, SQL, MySQL and Laravel
- [Platform link](#)

BOSSALINI

- A web application that allows users to buy articles
- Built with PHP,, Javascript, MySQL and Laravel
- [Platform link](#)

BLUESQUARE
